

Changing Cable Certification Types with TestPro

This article describes the process of changing the cable certification type used in a project. The main reasons you might want to modify the cable certification type include:

- Matching the appropriate test with the performance of installed cabling. For example, if you are installing a Cat 6 system, you'd want to test it to meet Cat 6 requirements
- Testing an unknown link to see if it meets desiried requirements. For example, if you inherited a cabling system with no records, and needed Cat5e performance, you could run Cat 5e autotests to ensure the cabling meets your needs

1. Select Project

Power ON TestPro. From the Home Screen, press the Project icon

2. From the Project screen, select Edit

3. From the Project description screen, press Edit

01/04/19 10:31	Main 100%
Project: Default	
Profile Name: Profile Type:	Certification Copper Certification
Limit: Cable:	TIA - Cat 6 Channel CAT 6A UTP, Generic UTP, Unshielded, NVP: 68%
Connector:	UTP Mod Jack 6A, Generic Unshielded, Unshielded
Label Scheme Operator:	: Simple Label Default
Edit	
	Profile Manager

5. From the Cables screen, press the up or down arrows to select your desired test standard

4. From the Profile screen, press Limit

6. Once your preferred test limit is selected according to the adapter used, i.e. Permanent Link or Channel, press it, then Enter

www.mayflex.com 0800

0800 75 75 65

7. From the Profile screen you will now see the Test type has changed to Cat 5e Permanent Link (in this example). Press Return.

8. From the Project description screen, you will confirm that the desired test type is selected. Press the rubber HOME button if you wish to return to Home screen.

IMPORTANT NOTE:

In this example we have changed the test type, but not yet changed the cable or connector type. The cable and connector type should match the cable test except in rare circumstances.
