

***PELCO***<sup>®</sup>

# Supercharge your oil & gas operations

Stay compliant, enhance worker protection  
and maximize uptime with rugged, intelligent  
security devices.

**Oil and gas**

**In the oil and gas sector, security isn't just a precaution. It's a core requirement for compliance, safety and operational continuity. From corrosive offshore platforms to unmanned pump stations in remote locations, your facilities face relentless environmental stress, strict regulatory oversight and evolving safety expectations. When the stakes are this high, your security can't miss a beat.**

**Pelco has spent over six decades developing video security devices that can withstand the harshest conditions. Our systems are engineered to do more than endure. They provide intelligent visibility that helps you detect threats, minimize downtime and protect the people and infrastructure that keep your operations running.**

**Let's turn your security system into your strategic advantage.**

# Meet regulatory demands with confidence

Operating in hazardous environments requires complete trust in your security infrastructure. Pelco's explosion-proof cameras are globally certified, meeting the highest safety standards including ATEX and IECEx. Whether you're securing a refinery's classified process zone, monitoring a remote pipeline or overseeing critical indoor operations, Pelco offers devices that are purpose-built for each area of your site.

Visibility is vital, especially where environmental conditions make remote monitoring difficult. Our ruggedized cameras deliver the reliable performance you expect in zero-light hazardous zones, gas-prone zones and locations exposed to extreme temperatures or corrosive chemicals. For long-range perimeter coverage and remote areas where visibility is limited, Pelco's thermal imaging systems detect activity at extended distances, even in complete darkness, fog or smoke.

---

*These devices aren't just built to last. They serve as a core element of your risk management strategy.*

---

# Proactively safeguard workers and prevent incidents

Keeping your people safe in a high-risk environment starts with better visibility and smarter detection. Our intelligent analytics detect unsafe conditions such as missing PPE, unauthorized access or loitering in restricted zones. By alerting your team in real time, our systems support fast, informed decisions that can prevent injury.

Thermal and radiometric capabilities further strengthen your safety. These devices monitor for abnormal temperature shifts in assets like pipelines, pumps or compressors, enabling early detection of equipment failures, overheating, leaks or fire hazards. In indoor spaces where camera use may be limited, our smart sensors can detect air quality issues, signs of aggression, vaping or smoking, which can help maintain a safer environment across your facility.

Pelco enables you to move beyond basic video security. Our devices turn your security system into a proactive safety platform that helps reduce incidents, shorten response times and avoid preventable shutdowns.

---

*We provide advanced tools to help you identify risks before they compromise employee safety.*

---

## Reduce downtime and operate with confidence

Unplanned downtime in oil and gas operations can be financially devastating. Pelco can help you maintain consistent visibility and system uptime with industrial-grade cameras that are proven to perform under harsh conditions. From high winds offshore to dusty desert pump stations, our hardware delivers continuous coverage that you can count on.

To help you stay ahead of system failures and resource constraints, Pelco automates core maintenance tasks. Real-time camera diagnostics and image health checks allow you to detect and resolve issues before they impact coverage. Scheduled firmware updates and remote patching reduce the need for on-site maintenance, letting your lean security team focus on mission-critical work rather than routine upkeep.

Whether you're managing a single facility or a network of remote sites, Pelco keeps your video infrastructure running reliably and securely, without adding unnecessary overhead.

## Your security should grow with you

As your operations evolve, your security system must be ready to scale. Pelco's open architecture gives you the flexibility to expand without vendor lock-in or expensive overhauls. Whether you're adding intelligent analytics, integrating new sensors or upgrading camera infrastructure, our platform is designed to grow with your business.

Pelco's devices integrate with leading video management systems including Genetec and Milestone. Our Pelco Connect plugin enables you to deploy and manage advanced analytics features, like forensic search and incident detection, within the platforms your team already knows, reducing implementation friction and avoiding unnecessary cost.

Dealing with unique mount or infrastructure challenges? We've got you. Our Special Modification Request program lets you customize Pelco cameras to fit your exact needs, including unique colors to match your aesthetics, custom mounts and retrofits for challenging installations.

Security today must also guard against digital threats. Pelco embeds robust cybersecurity features into every device, including Trusted Platform Modules, Secure Boot and compliance with FIPS 140-3 standards. With Elevate, firmware patches are delivered securely and automatically to help safeguard your system against cyber vulnerabilities without disrupting daily operations.

*Pelco devices scale easily and integrate smoothly to keep your security aligned with your operations.*

## Your partner in oil & gas safety and security

At Pelco, we don't just provide hardware. We deliver robust devices that match the realities of complex industrial environments. We understand the pressure to meet compliance standards, protect your workforce and maintain uptime across geographically dispersed and environmentally demanding sites.

Our team partners with you to design systems that integrate with your existing infrastructure, fit your operational workflows and evolve with your needs. Whether you're securing a single high-risk zone or deploying across multiple facilities, Pelco gives you the confidence to move forward with the right tools in place.

Let's talk about your most pressing security challenges and how Pelco can help you solve them.

## Supercharge your security. Just add Pelco.
