

FORS Statement

Mayflex can offer a range of delivery services, based on the need of the client. We are happy to advise that we work with a number of Logistic Partners that are FORS registered and accredited.

FORS membership provides an invaluable and independent confirmation that Logistics companies work to the best practices and consistently meet the demands of a recognised quality practice and a commitment to the highest standards of road safety, legal compliance, and customer care, demonstrating the highest level of operating ethos.

Through these partnerships, Mayflex can provide transportation options on bronze, silver and gold levels.

FORS Bronze is a base line to prove our partners meet safety, efficiency and environmental standards. Silver in turn is aimed at dramatically improving the overhaul safety of our fleet and ensures compliance with both CLOCS standard for construction logistics and Transport for London's work-related road risk (WRRR) and also meets the specs for Crossrail. Gold is for exceptional operators which have met specific targets and have maintained their bronze and silver accreditations.

This service is available upon specific request and would be quoted for on an individual basis dependent on vehicle availability and location of site, therefore we would ask for a minimum of 72 hours in advance of any potential deliveries.
