

## What is Fibre IRS?

Fibre Optic technology is now widely used for communal and commercial IRS Systems. The huge advantage of using a Fibre Optic IRS System over the original copper coax is that it can transport a higher amount of data over much longer distances with no signal loss. This means less amplification equipment which in turn streamlines the system, set-up and efficiency.

## Advantages of Fibre IRS

- ✓ Extremely High Bandwidth
 
- ✓ Longer Distance (10Km)
 
- ✓ Resistance to Electromagnetic Interference
 
- ✓ Low Security Risk
 
- ✓ Small Size
 
- ✓ Light Weight
