

Axis end-to-end solutions.

Professional surveillance and security for mid-size systems.

AXIS Camera Station is the ideal solution to meet the needs for efficient surveillance of small- and mid-sized installations, such as retail shops, hotels, schools and manufacturing sites – a proven solution with more than 50,000 installations worldwide. It is designed to perfectly match Axis' wide range of network products and product features to optimize system reliability and maximise system capability.

AXIS Camera Station is developed with a focus on ease of use and intuitive operation, ensuring that anyone can effectively manage incidents and quickly export high definition evidence. AXIS Camera Station allows the user to add useful functionality such as AXIS A8004-VE Network Video Door Station for audio visual identification and remote entry control, as well as interaction with AXIS A1001 Network Door Controller for access control. AXIS C3003-E Network Horn Speaker can also be integrated to enable an operator to remotely address people and deter unwanted activity.

What features can an Axis end-to-end solution provide?

- > Easy and intuitive operation
- > Visual awareness of site activities
- > Alarm management and audit trails
- > Secure doors and control who enters the building
- > Communicate with visitors and manage their entry
- > Voice communication and the ability to broadcast messages
- > Provide business intelligence with the use of analytics

An end-to-end solution to suit typical security and management requirements

- > Visual awareness
- > Access control
- > Visitor management
- > Voice communications
- > Alarm management

Out-of-the box ready recording solutions.

AXIS Camera Station S10 Recorder Series comprises a range of network video recorders for reliable high definition surveillance. AXIS S10 Recorders are preloaded with all necessary software including licenses and are preconfigured to minimize installation time.

Completed with monitors, cameras and other devices from Axis' wide product portfolio, they form a plug and play solution for mid-sized installations where active surveillance is needed.

System components

You can either opt for one of our out-of-the-box systems with optimized hardware and software, or build your system using our software together with standard PC and servers. A setup wizard with automatic camera discovery guides you through the setup process. This allows the video system to be up and running within minutes. Event configuration is simplified to four steps and can be used to reduce the number of recordings, interact with Axis devices and alert operators about important events. AXIS P8221 Network I/O Audio Module can be used to integrate with other third party devices.

What benefits can an installer of an Axis end-to-end solution receive?

- > Easy procurement, all system components from one company
- > Training costs reduced as there is a common configuration approach
- > Flexible cause and effect between devices
- > Easier to configure and maintain devices via the network
- > On-site hardware support for AXIS S10 Recorders

Axis solutions are easy to use and install, and they're designed to work perfectly for schools, retail, manufacturing sites and other mid-size installations.
