

1) TV Screen Size

Screens are specified within a common set of sizes based on measuring the screen diagonally from corner to corner. Most will say on the box but if re-hanging an existing screen, that's how to check.

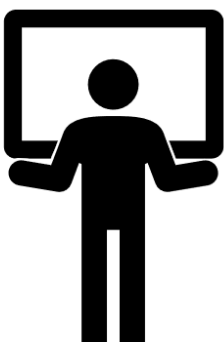

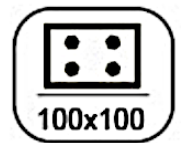

2) TV Gross Weight

The TV weight is an important factor in selecting the correct bracket, again most will specify gross weight of the TV, if not you'll need to find a set of bathroom scales. The weight the bracket will support is always clearly labelled on the packaging.

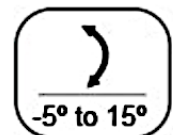

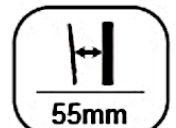

3) VESA Mount size

VESA mount is a common standard for fitment measurements and is stated in mm. So check with a ruler and if measuring 20cm or 200mm x 200mm, that's a 200 x 200 VESA mount.

4) Style of Bracket

Bracket types vary from fixed, Tilt and Full Motion. Tilt brackets are close to the wall but offer some movement to angle the screen. Full Motion brackets can be moved away from the wall and angled from side to side as well.

5) Choose Aura

A great range of quality brackets that all come with all the fixing hardware, and in plastic free packaging at the most competitive prices you'll find in the market place, job done.
