Troubleshooting

You can check if the Tetherbox is online on the activation page: tetherit.io/new - if the Tetherbox is offline, please ensure:

1. The Tetherbox has both power cable and network cable connected (you should see a green flashing light).

2. You have Internet and Power at the premises and you are able to access tetherit.io.

If the Tetherbox is connected correctly and you have power and Internet, please try to reboot the Tetherbox:

1. Press the power button briefly, the Tetherbox will power off within 1 minute.

2. If the Tetherbox does not power off, please hold the power button for 5 seconds.

3. Once powered off, please press the power button briefly to power the Tetherbox back on.
